Placement

OUR COMPANY SUGGESTS THE INSTALLATION BE CARRIED OUT AT A WORKSHOP OR BY QUALIFIED STAFF

- Clean well the area around the swing arm.
- Remove the front bolt from the chain guard.
- Put the clips on the support bracket and stich the adhesive foam tape on the inner side of the bracket so as to avoid scratching the swing arm.
- Place the two Velcro pieces on the inner side of the rear hugger and at the front corners.
- Place the bracket on the inner side of the swing arm so as to make a perfect fit.
- Place the hugger in position (Photos No 1 & 2), and screw on the bolt of the chain guard (left).
- Bolt on the right side of the hugger with the bracket. By moving the bracket you can adjust the distance between the rear hugger and the wheel.
- Push the front side of the hugger so that the Velcro sticks well enough.
