Placement

OUR COMPANY SUGGESTS THE INSTALLATION BE CARRIED OUT AT A WORKSHOP OR BY QUALIFIED STAFF

- Thoroughly clean the area around the shock absorber and the swing arm and remove the chain guard.
- Put the wing in place, to get a feeling of the position.
- Put the APR2 metal support with one M6 clip on the right side (as shown in photo 1) -do not remove yet the protective film until you finish the whole procedure
- on the left side of the bike above the chain guard place the nut and the bracket as shown in (also put some double face tape to keep it in place (Photo No. 1).
- Put the wing in place and tighten the front bracket and the left side in place of the old chain guard.
- Insert your hand on the right side bracket and screw it (photo No. 2).
- **CAUTION: By now you've screwed but not tightened the screws.**
- Make sure that the wing is right in the center
- Tighten the screws sequentially one after the other.
