

INSTRUCTIONS

MODEL : APRILIA SHIVER

PRODUCT : REAR HUGGER

CODE : RH-ASHIV/07

CONTENTS

MATERIAL SPECIFICATIONS

- Plastic Hugger
- 2 pcs. Metal Support (APR2 & APR3)
 - 3 pcs. M6 clips
 - 3 pcs. M6 x 15 screws

The product's material, made of ABS plastic with acrylic exterior layer, can be placed on your bike without requiring painting but if you want it painted, all paint companies have equivalent machinery at their disposal. If you want to paint it yourself, you should contact them to inform you on what you will need and how to do it.

Placement

OUR COMPANY SUGGESTS THE INSTALLATION BE CARRIED OUT AT A WORKSHOP OR BY QUALIFIED STAFF

- Thoroughly clean the area around the shock absorber and the swingarm .
- Place the wing in place, to get a feeling of the position. Place the M6 clips on the brackets
- Unscrew the nut that holds the shock absorber and put the bracket as shown in (Photo No. 1) .
- Position the wing and do the front screw only, without tightening .
- Remove the protective film and and place the bracket through the backside so that you can hold it with your hand while you do the front screw (while doing this the tape sticks as well in place) (as in Photo 2) .
- Make sure that the wing is right in the center
- Tighten the screws sequentially one after the other.
